

## EPOXYTEC CERTIFIED DIY PROGRAM

-- Underground--

*"High performance products that work where others fail"*

### *Epoxytec's DIY Program*

*with FREE Training and Support*

Introducing a unique program for your municipality designed to reduce costs associated with 3<sup>rd</sup> party engineering, bidding, and time wasted from logistical issues typically out of your control. This program was created to solve your bid management nightmares by giving you back control of your projects.

Not every job needs to be engineered or bid upon; in fact, many rehabilitative or preventive maintenance projects simply involve resurfacing and coating. Epoxytec's DIY (do-it-yourself) program can help, as it is geared specifically towards municipalities in order to help tackle repairs, rehabilitate and apply protection to structures in-house.

Epoxytec's DIY program for municipalities has been proven since 1990. This program offers a cost effective solution for all of your protective and rehabilitative needs found within water and sewer processing, collection and distribution (such as manholes, lift/pump stations, etc).

Not only is Epoxytec's DIY program cost effective, but the product line is high performance yet designed for simplicity. Formulated with zero solvents and made to eliminate I&I and protect against H2S.
